Beamer slides

1 Section 1

- We assume you can use \LaTeX ; if you cannot, [you can learn it here](#)
- Beamer is one of the most popular and powerful document classes for presentations in \LaTeX

2 Section 2

Selecting the Class

2 Section 2

After the last update to the graphic profile, the `sintef` theme for Beamer has been updated into a full-fledged class. To start working with `sintefbeamer`, start a \LaTeX document with the preamble:

Minimum SINTEF Beamer Document

```
1 \documentclass{sintefbeamer}
2 \begin{document}
3 \begin{frame}{Hello, world!}
4 \end{frame}
5 \end{document}
```

Code for a Page with an Itemised List

```
1 \begin{frame}  
2   \frametitle{Writing a Simple Slide}  
3   \framesubtitle{It's really easy!}  
4   \begin{itemize}[<+>]  
5     \item A typical slide has bulleted lists  
6     \item These can be uncovered in sequence  
7   \end{itemize}  
8 \end{frame}
```

Look

2 Section 2

- To change the colour of the title dash, give one of the class options `cyandash` (default), `greendash`, `magentadash`, `yellowdash`, or `nodash`.
- To change between the light and dark themes, give the class options `light` (default) or `dark`. It is not possible to switch theme for one slide because of the design of Beamer—and it's probably a good thing.
- To insert a final slide, use `\backmatter`.
- The aspect ratio defaults to 16:9, but you can change it to 4:3 for old projectors by passing the class option `aspectratio=43`; any other values accepted by Beamer are also possible.
